

## Access to Coriant Software

Access to Coriant software is provided through the Coriant Customer Portal in the Download Center:

Software available from the Coriant Customer Portal includes both major feature releases (also referred to as Software Upgrades) and maintenance releases (also referred to as Software Updates).

Customers who have elected to include Access to Software Updates and Upgrades in the scope of their Care service contract should make use of the Software Update/Upgrade tab in the Download Center of the Coriant Customer Portal to view the latest available software for Coriant products.

Customers who have elected to purchase Access to Software Upgrades separately should make use of the Purchased Software tab in the Download Center, to view software they have purchased.

The Coriant Customer Portal is available to customers with an active Coriant Care service contract. To request a license, go to [customer.coriant.com](https://customer.coriant.com) and select the option to request a license.
