

Coriant® Network Management and Control Services

Extending the Value of Coriant Network Management and Control Products

SERVICE SPECIFICS

Whether service providers are building new infrastructure or modernizing an existing network, efforts to speed time to market and reduce operating costs can easily be compromised with overly complicated tools, manual processes, or inefficient workflows. Every network and operating environment is different and demands custom-tailored network management and control solutions to achieve peak efficiency.

Coriant® Network Management and Control Services provide solutions that extend the value of Coriant Transcend™ Network Management System (NMS) and SDN products through:

- Customer specific application development for system integration and process automation
- Tailored services to address business needs in the areas of network management and control system implementation and management in both traditional and virtual environments
- Customized dashboard reporting and analytics solutions

Network Management and Control Services are delivered by a dedicated in-house team with proven expertise in network management and control systems, analytics, automation, and reporting. This team works with you to design and deliver a solution to your precise specification. Coriant® Network Management and Control Services consultants have extensive experience working with service providers to develop innovative solutions for complex technical problems that improve current operations.

Network Management and Control Services capabilities include:

- **Design Services** - Ensure a scalable system platform for both traditional and virtual environments
- **Installation Services** - Turnkey system installation including operating system, database applications, licenses, application software, and custom application elements, as well as failure scenario testing for high availability solutions
- **Upgrade Services** - Ensure that schedules and requirements are met including development and pre-testing of upgrade methods of procedure adapted to your environment
- **System Administration Services** - Including audits to assess and improve system health as well as solutions to automate routine system administration tasks
- **Change Services** - Available for a variety of change scenarios for system consolidation or expansion including services to merge, migrate, or split network management and control system databases
- **Interface Development** - Northbound or southbound interface design, development, and integration

WHY CHOOSE CORIANT FOR NETWORK MANAGEMENT AND CONTROL SERVICES?

- **Leverage** our dedicated in-house team of platform experts and software developers to deliver customized network management and control solutions
- **Receive** optimized solutions that are developed, integrated, and tested specifically for Coriant Transcend™ network management and control products including SDN, 8000 INM, and TNMS
- **Benefit** from intense focus on defining and developing timely and cost-effective solutions that can be quickly placed into service to address your specific business needs

- **Dashboard Reporting and Analytics** - Custom solutions to present key indicators in intuitive, quick-read format to reveal trends for use in planning and day-to-day operations
- **Custom Tool Development** - Introduce automation to any operating routine or a more complex, repeatable set of engineering tasks

Network Management and Control Services solutions are developed by a central team with delivery occurring through remote means or at your premises depending on project requirements. A variety of commercial options are available including both one-time license purchase and annuity service models.
