

## Coriant® Network Migration Services

*Experience and Resources to Complete Complex Migration Projects with Confidence*

### SERVICE SPECIFICS

Migrating live traffic involves inherent risks that could cause service outages or affect service quality. To keep your customers satisfied, you need to mitigate these risks as much as possible and achieve a traffic transfer with minimal impact to customer services.

Common challenges that arise with traffic migration projects include:

- Limited software tools to aid in migration planning or execution
- Limited access to skilled resources with experience performing similar migration work
- Undocumented or untested migration processes
- Resource contention distracting focus from planning and execution

Coriant follows a four step process to create custom solutions to help service providers transfer their traffic in support of a wide range of strategic initiatives such as facility consolidation or introduction of new technology. The four steps are:

- 1. Network Assessment** – To fully characterize the current network state and collect required information
- 2. Planning** – Develop and test a detailed migration plan and associated method of procedure
- 3. Network Preparation** – Confirm the receiving network is ready for migration
- 4. Migration Execution** – Perform the migration procedure, including testing and documentation

Coriant® Network Migration Services are available to address a variety of migration needs, including:

- Wholesale network replacement
- Gradual migration through a cap and grow plan
- Consolidation and cost optimization within an existing network

By leveraging Coriant experience with live traffic migration, traffic can be successfully transferred on time and on budget with minimum risk to existing customer services.

### TO PURCHASE

For more information about Coriant® Professional Services, please consult your local Coriant sales representative or regional sales office.

### WHY CHOOSE CORIANT FOR NETWORK MIGRATION SERVICES?

- **Reduce** migration execution time leveraging Coriant proprietary tools and processes
- **Ensure** potential issues are identified and addressed before they affect the schedule
- **Bypass** the learning curve with Coriant expertise
- **Reduce** cost by avoiding delays and expensive rework
- **Minimize** service disruption with detailed project planning
